

# Identify your ideal data professional role

Earlier, you learned about the role of data professionals and how organizations delegate responsibilities. Additionally, you were introduced to four basic classifications for data professional job titles: data scientist/analyst, data engineer, insights/analytics team manager, and business intelligence analyst. Now, it's your turn to reflect and share your reflections with other learners.

For this discussion prompt, consider the following:

Based on your previous experience and personal and/or professional qualities, which of the four basic classifications of data professional jobs best fits your interests?

What aspects of your skills and personal qualities helped you make your decision?
