

Reflect on your capstone project

The capstone portfolio project required skills that you have acquired throughout the previous six courses in this program including:

Data workflow

Python

Exploratory data analysis

A/B testing

Regression models

Machine learning models

In the scenario, you were given the opportunity to build a model based on a given dataset and confirm the selection of your variables.

For this discussion prompt, consider the following:

Discuss the skills you gained in the advanced data analytics certificate that you found to be the most useful as you worked on this project.

How has your understanding of the data analysis process expanded after completing the tasks needed for the capstone project?

What's an interesting element of the entire data analysis process that you became more aware of during your capstone project?
