Reflect on your Course 3 project

In this third end-of-course project, you began to expand your role as a data analyst. Within each of the available scenarios, you were given the opportunity to use Python to perform exploratory data analysis on a project dataset and construct data visualizations with Tableau.
For this discussion prompt, consider the following:

How did the tools available for the Python programming language assist you in accomplishing your tasks in this project?
In what ways has Python and its tools helped you to gain a deeper understanding of the process of exploratory data analysis?
What is an interesting aspect of Python, its available tools, and/or Tableau that you learned about during your time in this course that you were not previously aware of?
