Reflect on your Course 1 project

Your first end-of-course project involved entering a scenario where you assumed a new position as a data analyst. After understanding the business problem, you collected information from various stakeholders and consulted the PACE (plan, analyze, construct, and execute) strategy document for guidance. By applying your new data professional skills, you were able to order a list of necessary tasks and structure milestones within a project proposal for your team.
For this discussion prompt, consider the following:

In what ways was the PACE strategy document the most helpful when completing your first end-of-course project?
How has your understanding of the planning stages of projects expanded?

What's an interesting element of the planning stages of the data analysis process you discovered that you didn't already know about?
